Performance Measures

Few Examples:

- Accuracy- It is the function of prediction or classification a model got right.
- Sensitivity- It is a measure of the proportion of actual positives that are identified correctly.
- Specificity- It is a measure of the proportion of actual negatives that are identified correctly.
- False Positive Rate- It is the proportion of individuals having negative condition for which the test is positive.
- False Negative Rate- It is the proportion of individuals having positive conditions for which the test is negative.
- Receiver Operating Characteristics (ROC) ROC curve indicates the trade-off between sensitivity. It is a measure of usefulness of a test if the test is more useful if the area under the curve is larger.
- RMSE- It is a standard way to measure the error of a model in predicting quantitative data.
- MAE- It is a standard way to measure the error of a model in predicting quantitative data.
